

Komponent

```
<input type="text" v-model="keyword" @keyup="loadUsers1"><br />
```

```
loadUsers1: function(page=1)
```

```
{
  axios.post('/api/search?page='+page, {
    keyword: this.keyword
  }).then(res=>{
    this.users = res.data
  });
},
```

Kontroler

```
public function search(Request $request)
```

```
{
  if($request->keyword)
  {
    $search=$request->keyword;
    $users = User::where('name', 'LIKE', '%'.$search.'%')->paginate(1);
    return response()->json($users);
  }
  else
  {
    $users = User::paginate(1);
    return response()->json($users);
  }
}
```

Api.php

```
Route::post('/search', 'App\Http\Controllers\UserController@search')->name('users-page1');
```
